***Claim Rejections - 35 USC § 101***

1. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

2. Claims 20-22 and 38 are rejected under 35 U.S.C. 101 because the claims are directed to a recording medium storing nonfunctional descriptive material.

Data structures not claimed as embodied in computer-readable media are descriptive material per se and are not statutory because they are neither physical “things” nor statutory processes. See, e.g. Warmerdam, 33 F. 3d at 1361, 31 USPQ2d at 1760 (claim to a data structure per se held nonstatutory) and merely claiming nonfunctional descriptive material stored in a computer-readable medium does not make it statutory. In addition a mere arrangements or compilations of facts or data, are merely stored so as to be read or outputted by a computer without creating any functional interrelationship either as part of the stored data or as part of the computing processes performed by the computer then such descriptive material alone does not impart functionality either to the data as so structured, or to the computer, and therefore are not statutory. See MPEP 2106.IV.B.1.

***Information Disclosure Statement***

3. The information disclosure statement filed 06/25/2004 fails to comply with 37 CFR 1.98(a)(2), which requires a legible copy of each cited foreign patent document; each non-patent literature publication or that portion which caused it to be listed; and all other information or that portion which caused it to be listed. It has been placed in the application file, but the information referred to therein has not been considered.

***Allowable Subject Matter***

Claims 23-37 are allowed.

4. The following is an examiner's statement of reasons for allowance: The present invention is directed to an information recording/reproducing apparatus and method comprising correspondence definition information which defines a correspondence relationship between a plurality of packets multiplexed on time axis. Independent claims 23, 26, 29, 31, 33, 34-37 identify the uniquely distinct feature "an object information file for storing, as reproduction control information for controlling the reproduction of said object data file, another correspondence definition information which is not multiplexed by the unit of packet and which defines the correspondence relationship aside from the one correspondence definition information." The closest prior arts, Ando et al (US Pat. No. 7,346,266), Mori et al. (US Pat. No. 7, 228, 0610), Yagi et al. (US Pat. No. 7, 386, 223), Kawakami et al. (US Pat. No. 6,236,663), either singularly or in combination fail to anticipate or render the above underlined limitations obvious.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
